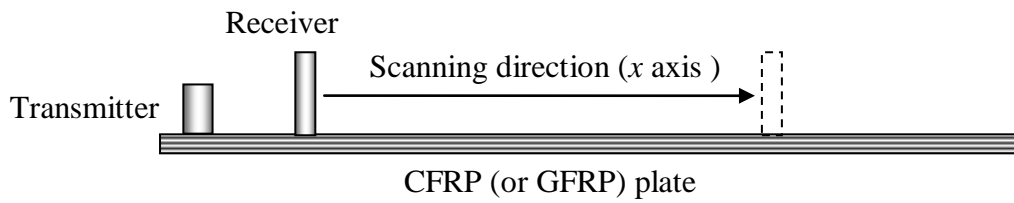

Figure 6. Experimental contact test-set up for composite sample

Figure 7. Theoretical and experimental dispersion curves in 8.4mm thickness GFRP plate

| Sensor type | Operating Frequency range (KHz) | Resonant frequency (KHz) | S/N   |
|-------------|---------------------------------|--------------------------|-------|
| WDI         | 100 - 1000                      | 125 [500]                | AS.F2 |
| R6          | 35 - 100                        | 55 [90]                  | AS.H1 |
| R6          | 35 - 100                        | 55 [90]                  | AS.H2 |
| PICO        | 200 - 750                       | 250 [500]                | AS.E1 |
| Micro 30    | 100 - 600                       | 125 [225]                | AS.K1 |

| Preamplifier type | Operating Frequency range (KHz) | Amplification (dB) | S/N   |
|-------------------|---------------------------------|--------------------|-------|
| 1220A             | 20 - 1200                       | 40                 | AP.B1 |
| 1220A             | 20 - 1200                       | 40                 | AP.B4 |

| Software         | Type                      | Version |
|------------------|---------------------------|---------|
| AE-Win for PCI-2 | AE Acquisition software   | E3.52   |
| NOESIS [5]       | AE data Analysis software | 5.3.36  |
