MOLISE REGION, ITALY

Three Italian organisations are involved in the FP7 project **THE ISSUE**:
UNIMOL; Sviluppo Italia Molise; e-Geos

The Molise Region

has been working for several years with great determination in the “**innovation**” sectors, because it believes that these industries can open **very important opportunities** for the **industrial and economic development** of the region.

The **main objective** is to provide regional planners with **comprehensive models and tools**, inspired by new technologies and research applications, related to Transport infrastructures and priority areas, **to support their regional strategic planning**.

The participation in THE ISSUE has been **strongly supported by the Molise Region Administrative Authority** in order to develop a **more competitive transport-related economy** through innovative research and projects.

The **Molise Region** is a **focal point at the junction** between the regions of the Tyrrhenian Sea and the Adriatic Sea. In this context, **mobility strategies** will have a **marked impact on the environment** of a region characterised by its **natural environment**. Furthermore, the development of a modern transport network that is capable of preserving and enhancing the natural environment as well as increasing the efficiency of the network will have a **decisive impact on the local economy and the health of its citizens**.
